

Connecting the Northland Communities

North Oak Transit Study

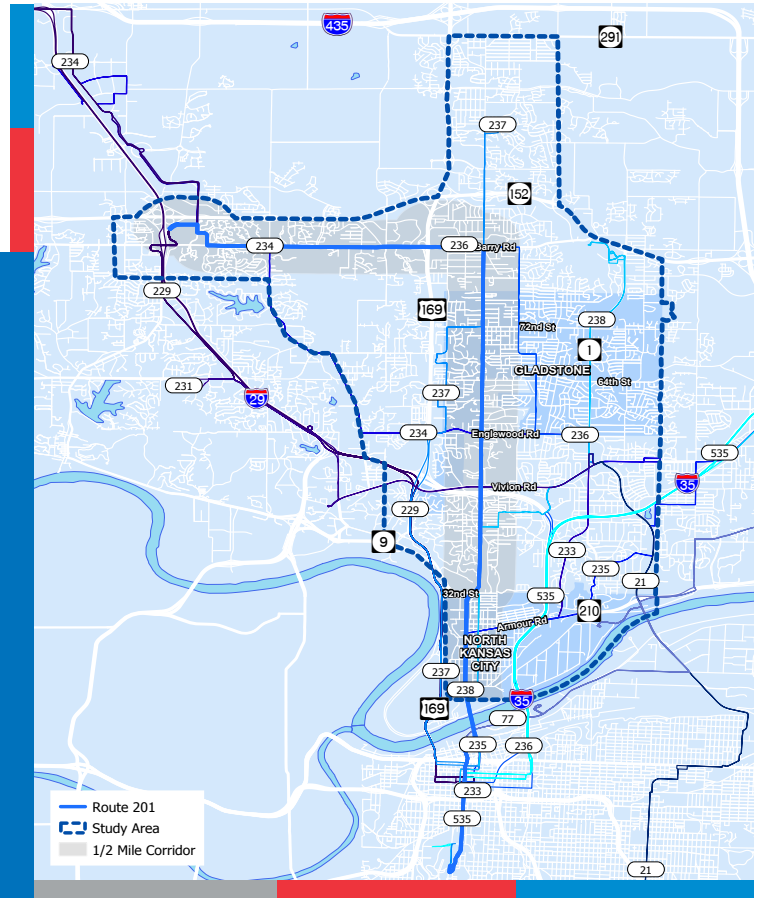

Study Overview

The North Oak Corridor Transit Study will provide recommendations on how transit services can better serve the North Oak Corridor and surrounding neighborhoods from downtown Kansas City, through North Kansas City and Gladstone.

The purpose of the North Oak Corridor Transit Study is to:

- Engage the Northland community to determine transit access needs and services along the North Oak Corridor to make improvements for increasing mobility to and from surrounding neighborhoods.
- Consider the feasibility of a MAX-level transit investment in the Burlington/North Oak corridor.
 - MAX is RideKC's Bus Rapid Transit service that includes high service levels, increased rider amenities, and rail-like stations.
- Review existing plans and policies to further land use and corridor development recommendations that would support a significant investment in the corridor.
